Bjørn Andreas Andersen

Born 1996

Address: Smedasundet 66, 5528 Haugesund

I design and 3D print parts, prototypes and small series for businesses. I also build websites and apps, and run the servers they live on.

Education

2025 - 2026 **Noroff, Online study**
Technical drawing - Mechanical

2021 - 2022 **Noroff, Online study**
Network and System Administration

2018 - 2020 **Skap Kreativ Folkehøyskole**
Student and scholarship recipient

2017 - 2018 **Sonans, Bergen**
Upper secondary supplement

2012 - 2014 **Åkrehamn Videregående Skole**
Electrical studies

Skills

3D modelling and product design
3D scanning, laser cutting and CNC machining
Workshop and production equipment
Technical documentation and image editing
Training and technical support
System administration and web development

Certifications

Driver's license class B
Drone pilot certificate, EASA A1/A3

Experience

2020 - Present **Sole proprietor at Polybjorn Andersen**
Design and production services with a focus on 3D printing, spanning furniture, fittings, and custom commissions. Works directly with clients or collaborates with other makers.

2021 - 2026 **Additive manufacturing workshop manager at Lindesnesregionen Næringshage**
Helped establish and independently managed the Addidé innovation centre, offering courses in 3D design and printing, design services, and series production. Worked with over 50 clients across design development, modelling, and FDM and SLA printing.

2022 - 2024 **Technical writer at Nøsted &**
Modernised operator manuals for multiple Igland machine ranges across 7 languages in collaboration with engineers: new 3D models, renders, vector graphics and restructured text.

2022 - 2024 **Technician at Mandal Frivilligsentral**
Helped build and run Bua Makerspace, a Prusa 3D printer farm and internet café, open to the public. Technical support, courses and event responsibility.

2018 - 2023 **Various roles at Skap Kreativ Folkehøyskole**
Workshop operations and maintenance of 3D printers, CNC and laser equipment, day-to-day building operations, event and stand hosting, catering, student project support and teaching. Also produced furniture for students, staff, and the school, as well as gifts for guest speakers.

2014 - 2017 **Electrician apprentice at Apply TB**
Worked across residential service calls and large-scale construction projects, including fibre installation for Haugaland Kraft.

Bin with lid for helicopters

Norwegian Air Ambulance Foundation, 2025-2026

First model

Revision

Prototype

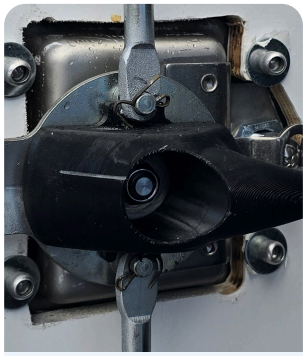

Delivered

Norsk Luftambulanse needed 12 bins with lids for their helicopters. They had a 3D model, but it was not made for 3D printing. One prototype in grey PLA, then 12 bins in white PLA with the logo in red and blue. 138 hours of printing, shipped finished to the client.

More client work

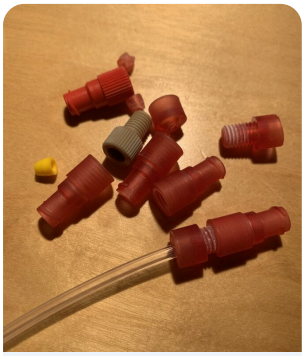

New chain hook
Industrial company, 2024

Trailer door handle
Industrial company, Addidé

Tooth sculpture
Dental clinic, 2025

Luer connectors
Pharma industry, Addidé

What I deliver

Discovery

Meeting, measuring and a sketch of the part or the need.

Obsidian

3D model

Parametric model and working drawing, delivered as STEP, STL or PDF.

Blender · CADCraft · FreeCAD · OpenSCAD

Print

Prototypes until the part works, then small runs.

Bambu Lab P2S

Documentation

Manuals, instructions and rendered images.

Blender · DesignCraft · PhotoCraft · VectorCraft

Own software

Ferd

Open-source travel map for places and GPS routes, as a self-hosted web app and an Android app.

Docker, Kotlin, Leaflet, Python

Audio language tagger

Finds unlabelled audio tracks in MKV files, identifies the language from short samples and writes it into the file.

Python, whisper.cpp

Enquiries and client pages

The polybjorn.com enquiry form, and a page per job where the client follows progress, answers questions and accepts quotes.

Astro, Cloudflare Workers, NixOS, Python

Readest highlights

Obsidian plugin that brings book highlights from Readest into notes, listed in the community plugin directory.

Obsidian, TypeScript

Self-hosted servers

A home server and Raspberry Pis set up from one NixOS configuration, with a Git forge, CI and a private network between them.

Docker, Forgejo, NixOS, Syncthing, Tailscale

Local models on a Git forge

A test of whether local AI models find related issues on a Git forge better than a plain keyword search. The keyword search did better.

BM25, Forgejo, Qwen3-Embedding
